

## I SEMESTER

### 15LC01 / 15LW01 APPLIED MATHEMATICS

2 2 0 3

**VECTOR SPACES:** Real vector spaces and subspaces – linear independence - basis and dimension – row space, column space and null space - rank and nullity. (6+6)

**INNER PRODUCT SPACES:** Inner products – angle and orthogonality in inner product spaces – Orthonormal bases: Gram-Schmidt process, and QR decomposition – Best approximation: Least squares – change of basis – Orthogonal matrices. (6+6)

**LINEAR TRANSFORMATION:** Linear transformations – Kernel and range – inverse linear transformation – matrices of linear transformation. (3+3)

**STOCHASTIC PROCESSES:** Introduction – classification of Stochastic processes. Markov chain: Introduction - transition probability matrices, Chapman Kolmogorov equations, classification of states, limiting probabilities, Poisson Process - continuous Time Markov chain: birth-death processes, transition probability functions, Kolmogorov equations, limiting probabilities. (6+6)

**GRAPH THEORY:** Graphs - directed and undirected, sub graphs, graph models, degree of a vertex, degree sequence, hand-shaking lemma, walk, trail, path, connectedness, distance, diameter. Common classes of graphs – regular, complete Petersen, cycle, path, tree, k-partite, planar, hypercube, mesh - Isomorphic graphs. Representation of graphs – adjacency list, incidence list, adjacency matrix and incidence matrix, Eulerian graphs – Chinese postman problem and its solution – Hamiltonian graphs – travelling salesman problem – nearest neighbour algorithm. (9+9)

**CASE STUDIES:** Applications of Vector space, Stochastic processes and Graph theory in communication systems and networks, image processing and information theory.

Total L: 30 + T: 30 = 60

### 15LC02 BASEBAND COMMUNICATION

3 0 0 3

**PROBABILITY & RANDOM PROCESS:** Probability, Random variables, statistical averages of random variables, Random process, Mean, correlation and covariance functions, Power spectral density, Response of a Linear time invariant system to a random input signal, Gaussian Process, Central limit theorem. (9)

**SIGNAL-SPACE ANALYSIS AND TRANSFORMS:** Geometric representation of signals, Gram-Schmidt Orthogonalization procedure, Fourier Transform, Hilbert Transform – applications (9)

**BASEBAND MODULATION:** Sampling theorem, Quantization, Baseband Signalling Concepts - Signaling formats - RZ/NRZ, Duobinary Splitphase (Manchester) and high density bipolar coding, PAM, PCM, Delta modulation, Linear Prediction, DPCM, ADPCM, Adaptive delta modulation (9)

**NOISE CHARACTERIZATION:** Types of noise in communication systems, AWGN, Narrowband noise, Representation of narrowband noise in terms of In-phase and Quadrature components, Noise figure, Noise temperature (9)

**BASEBAND DEMODULATION:** Error performance degradation in Communication systems, Signal-to-noise ratio, Probability of error, Detection of Binary signals in Gaussian Noise- matched filter, Maximum Likelihood receiver, error probability performance, ISI, Nyquist's criterion, pulse shaping, Equalization. (9)

Total L: 45

## 15LC03 INFORMATION THEORY AND ERROR CONTROL CODING

3 0 0 3

**MEMORYLESS FINITE SCHEMES:** Self information measure - Entropy function - Conditional Entropies - Characteristics of Entropy function - Derivation of the noise characteristics of a channel - Mutual information - Redundancy - Efficiency and channel capacity - capacities of channels with symmetric noise structure (9)

**CONTINUOUS CHANNELS:** Definitions of different entropies - Mutual information - Maximization of the entropy of a continuous random variable - Entropy maximization problems - Channel capacity under the influence of additive white Gaussian Noise- Parallel Gaussian Channel. (9)

**ELEMENTS OF ENCODING:** - Source coding techniques - Necessary and sufficient conditions for noiseless coding - fundamental theorem of discrete noise-less coding - Fundamental theorem of discrete coding in presence of noise. (8)

**ERROR CONTROL CODING:** Need for error control coding - Linear block codes - Optimum soft decision decoding of linear block codes - Hard decision decoding - Polynomial representation of codes - Cyclic codes - Convolutional codes - Viterbi decoding algorithm – Other decoding methods of convolutional codes, Galois fields, BCH codes, Reed Solomon codes, Berlekamp Algorithm, Interleaving and Concatenated codes, Turbo codes, Low-Density Parity-Check codes (9)

**ITERATIVE DECODING:** Serial concatenation using inner block codes - Serial concatenation using inner convolutional codes – product codes – generalized array codes – applications of multistage coding– The BCJR algorithm – use of extrinsic information – recursive systematic convolutional codes – MAP decoding of RSC codes – Interleaving and trellis termination – the soft output viterbi algorithm - Gallager codes – serial concatenation with iterative decoding – performance and complexity issues – application to mobile communication. (10)

## 15LC04 COMMUNICATION NETWORKS

3 0 0 3

**NETWORKING BASICS:** Evolution of computer networks, General principles of network design, packet and circuit switching, network architecture and standardization, network characteristics, protocol layers and their service models, principle of application layer protocols-web and HTTP-FTP-Electronic Mail - DNS-SNMP-Socket programming (10)

**END TO END CONNECTIVITY:** Connectionless transport , Simple Demultiplexer (UDP), Principles of reliable transport, Reliable Byte Stream(TCP), End-to-End Issues, Connecting Establishment and Termination, Sliding Window Revisited, TCP Extensions, Queuing Disciplines, Remote procedure call, congestion control, congestion avoidance ,Quality of service (10)

**INTERNETWORKING:** Switching and bridging, basic internetworking, Internet protocol IPv4, IPv6, Routing algorithms, routing in the internet (RIP, OSPF, BGP), broadcast and multicast routing, routing among mobile devices (9)

**LINK LAYER AND LOCAL AREA NETWORKS:** Link layer services –framing –Error detection –media access control – Ethernet-CSMA/CD - 802.11 wireless LANs – Architecture-MAC protocol-mobile management (8)

**DATA COMMUNICATION:** Signal characteristics –Data encoding and multiplexing - Data transmission- Transmission links –Data line devices (8)

**Total L: 45**

## 15LC05/15LW05 RF PASSIVE CIRCUIT DESIGN

3 2 0 4

**PASSIVE RF COMPONENTS AND TRANSMISSION LINE ANALYSIS:** High frequency Resistors, Capacitor and Inductors – Transmission Line Analysis: Line equation, Micro strip line, Voltage Reflection Co-efficient, propagation constant phase velocity and special termination - Smith Chart-Impedance transformation - Analysis of parallel RL circuit and parallel RC circuit. (9+6)

**SINGLE AND MULTI PORT NETWORK THEORY AND RF FILTER DESIGN:** Definition - properties - interconnection of networks - ABCD parameters and S parameters - RF Filter Resonator and filter configuration - Butterworth and chebyshev filters. Design of micro strip filters. (9+6)

**DESIGN OF MATCHING NETWORK:** Matching by Discrete Components - Design of two-component matching network, Design of T and  $\pi$  matching network- Matching by micro strip line - Design of matching network - Design of stub matching. (9+6)

**PASSIVE COMPONENT MODELS:** Resistive, self-inductance, and stray capacitance of conductors- frequency response of physical resistors- modeling physical inductors- ferrite beads- via hole models- planar transmission line for RF/ MW applications- dielectric board materials- crystal resonators and models- SAW resonators (9+6)

**FILTERS AND RESONANT CIRCUITS :** Introduction- filter specifications-various filter types- LF versus RF/MW filters- filter design outline- transmission line- network transformations- LC resonant circuit in filter design- coupled line filter design using CAD (9+6)

**Total L: 45 + T: 30=75**

### TUTORIAL COMPONENT:

1. Study of Advanced Design System Tool.
2. Design and simulation of transmission line
3. Design and simulation of impedance matching networks.
4. Design simulation of directional couplers.
5. Design and simulation of Radio frequency Passive filters.

### REFERENCES:

## 15LC51 COMMUNICATION NETWORKS LABORATORY

0 0 2 1

In this course the students will be provided with an orientation program on the following equipment/software for duration of 15 hours. After this orientation each student is expected to formulate a complete an activity of interest which has to be derived from the orientation program under the guidance of a faculty. The details like background, problem definition, state of technology/ knowledge in that area by a good literature review (5 latest papers), objectives, methodology, equipment that can be used from the orientation program, results from the experiments and their interpretation with respect to the assumptions or background and a formal conclusion are expected in the report which is to be submitted at the end of the semester. This work is evaluated for the credit assigned. Expected hours needed for this work is 40 hours.

### Topics for orientation program

- Simulation of HTTP protocol using TCP sockets
- Simulation of DNS using UDP sockets
- Simple Chat program using TCP sockets
- Learning commands like TCP Dump, Netstat, Trace Route
- Performance evaluation of MAC protocols using discrete event network simulator
- Performance evaluation of Routing protocols using discrete event network simulator
- Study the working and routing table formation of Interior Routing Protocols, i.e. Routing Information protocol (RIP) and Open Shortest Path First (OSPF)

**Total P: 30**

## 15LC61 INDUSTRY VISIT & TECHNICAL SEMINAR

0 0 4 2

The student will make at least two technical presentations on current topics related to the specialization. The same will be assessed by a committee appointed by the department. The students are expected to submit a report at the end of the semester covering the

various aspects of his/her presentation together with the observation in industry visits. A quiz covering the above will be held at the end of the semester.

**Total P: 60**

## II SEMESTER

### 15LC06 ADVANCED DIGITAL COMMUNICATION SYSTEMS

**3 0 0 3**

**BANDPASS MODULATION AND DEMODULATION:** Digital bandpass modulation techniques, Detection using matched filter - Optimum receivers for arbitrary binary signals and M'ary orthogonal signals - Analysis of coherent and non coherent detection schemes for ASK, PSK and DPSK - M'ary signalling schemes - QPSK and QAM – MSK- Performance of the data transmission schemes under band limited channels. Trellis coded Modulation. (9)

**EQUALIZATION:** ISI and Channel Capacity , Optimal zero forcing equalization, Generalized Equalization Methods, Fractionally Spaced Equalizer, Transversal Filter Equalizers, Adaptive Equalizers – Adaptive Linear Equalizer, Adaptive DFE. (9)

**SPREAD SPECTRUM SYSTEMS:** Model of Spread spectrum Digital Communication Systems - PN spread spectrum signals - Generation and Application of PN sequences – DS and FH spread spectrum signals – Performance of spread spectrum systems in AWGN (9)

**SYNCHRONISATION OF DIGITAL COMMUNICATION SYSTEM:** General problem of synchronization - MAP and ML estimation of signal parameters - Generalization of the estimator equations to multiple symbol intervals and multiple parameters - Data aided and Non data aided synchronization - Carrier recovery circuits - Symbol clock estimation schemes. (9)

**MULTICARRIER MODULATION:** Need for Multicarrier Modulation, Introduction to Orthogonal Frequency Division Multiplexing, Peak-to-Average Power Ratio, Synchronization in OFDM, OFDM transmission over Gaussian channels, Multicarrier CDMA and its types, MC-CDMA performance in synchronous environments (9)

**Total L: 45**

#### REFERENCES:

### 15LC07/15LW06 ADVANCED DIGITAL SIGNAL PROCESSING

**3 2 0 4**

**INTRODUCTION:** Classification of signals and systems – Properties of Systems – LTI Systems – Need for frequency domain analysis - Fourier transform for continuous and discrete time signals – Z-Transform - relationships between system representations - DFT – FFT - recursive and non-recursive filters – Linear phase FIR filters – Realization of FIR filters – finite word length effects in DSP system design (9+6)

**MULTIRATE SIGNAL PROCESSING:** Representation of discrete time signals – down sampling – up sampling - Noble identities – cascading sampling rate convertors - Decimation with transversal filters – interpolation with transversal filters – decimation with polyphase filters – interpolation with polyphase filters – decimation and interpolation with rational sampling factors - multistage implementation of sampling rate convertors. (9+6)

**Filter banks:** Two channel filter banks - QMF filter banks - Perfect Reconstruction Filter banks - Filter banks with tree structure and parallel structure - Applications – speech and audio coding – image and video coding. (9+6)

**POWER SPECTRUM ESTIMATION:** Introduction – Non parametric methods - Periodogram – Modified Periodogram - Bartlett, Welch & Blackman Tukey methods - Performance comparison - Parametric methods - Auto Regressive (AR) spectrum estimation - Relationship between autocorrelation and model parameters – Moving Average and Auto Regressive Moving Average spectrum estimation. (9+6)

**ADAPTIVE FILTERS:** Introduction – Applications – System identification – Inverse modeling – Prediction - Interference Cancellation - Adaptive linear combiner – Performance function – Gradient and Minimum Mean Square error – Gradient search by the method of steepest descent – LMS algorithm – convergence of LMS algorithm – Learning curve – Misadjustment – RLS algorithm. (9+6)

#### TUTORIAL COMPONENT:

1. Signal operations and verification of system properties.
2. Time and frequency domain analysis of decimators and interpolators.
3. Non parametric method of power spectrum estimation.
4. Parametric method of power spectrum estimation.
5. Implementation of LMS and RLS algorithms.

Total L: 45 + T: 30 = 75

### 15LC08/15LW08 RADIATING SYSTEMS

3 0 0 3

**ANTENNA FUNDAMENTALS:** Antenna fundamental parameters Radiation integrals ,Radiation from surface and line current distributions – dipole, monopole, loop antenna; Mobile phone antenna- base station, hand set antenna; Image; Induction ,reciprocity theorem, Broadband antennas and matching techniques, Balance to unbalance transformer, Introduction to numerical techniques.

(9)

**RADIATION FROM APERTURES:** Field equivalence principle, Radiation from Rectangular and Circular apertures, Uniform aperture distribution on an infinite ground plane; Slot antenna; Horn antenna; Reflector antenna, aperture blockage, and design consideration.

(9)

**ARRAY ANTENNA:** Linear array –uniform array, end fire and broad side array, gain, beam width, side lobe level; Two dimensional uniform array; Phased array, beam scanning, grating lobe, feed network, Linear array synthesis techniques – Binomial and Chebyshev distributions.

(9)

**MICRO STRIP ANTENNA:** Radiation Mechanism and Excitation techniques : Microstrip dipole; Patch ,Rectangular patch, Circular patch, and Ring antenna – radiation analysis from cavity model; input impedance of rectangular and circular patch antenna; Microstrip array and feed network; Applications of microstrip array antenna.

(9)

**EMC ANTENNA AND ANTENNA MEASUREMENTS:** Concept of EMC measuring antenna; Tx and Rx antenna factors; Log periodic dipole, Bi-conical, Ridge guide, Multi turn loop; Antenna measurement and instrumentation – Gain, Impedance and antenna factor measurement; Antenna test range Design.

(9)

Total L: 45

### 15LC09 WIRELESS COMMUNICATIONS

3 0 0 3

**OVERVIEW OF WIRELESS COMMUNICATIONS AND CELLULAR CONCEPT:** Evolution of Wireless Communications, Cellular Concept - Frequency Reuse, Channel assignment strategies, Handoff Strategies, Interference and system capacity, path loss, and Shadowing : Free-Space Path Loss, Two-Ray Model, Simplified Path Loss, Shadow Fading, Path Loss and Shadowing, Outage Probability under Path Loss and Shadowing.

(9)

**STATISTICAL MULTIPATH CHANNEL MODELS:** Statistical Multipath Channel models – Time varying Channel Impulse Response, Narrow Band Fading Models – Autocorrelation, Cross Correlation, and Power Spectral Density, Envelope and Power Distributions, Level Crossing Rate and Average Fade Duration, Power Delay Profile, Coherence Bandwidth, Doppler Power Spectrum and Channel Coherence Time.

(9)

**DIVERSITY:** Realization of independent fading paths, Receive diversity, Transmit Diversity, Moment generating functions in diversity analysis – Diversity analysis for MRC, EGC and SC.

(8)

**CHANNEL CAPACITY:** Capacity in AWGN Channel, Capacity of Flat Fading Channels – Capacity of Frequency Selective Fading Channels, Water filling and inverse Water filling algorithms – Time-Invariant Channels, Time-Varying Channels, Narrowband MIMO model, Parallel Decomposition of the MIMO Channel, MIMO Channel Capacity – Static channels, Fading Channels – Channel known to the transmitter (Water Filling), Channel unknown to the transmitter (Uniform Power Allocation).

(10)

**BER ANALYSIS OF WIRELESS CHANNELS:** BER: Error Probability for BPSK and QPSK in AWGN Channel, BER analysis of Fading Channels – Outage Probability, Average Probability of Error, Moment generating function approach to average error probability, Combined outage and average error probability. (9)

**Total L: 45**

**15LC10 FPGA BASED COMMUNICATION SYSTEM DESIGN**

**3 2 0 4**

**VERILOG HDL:** HDL overview - Modules and ports - compiler directives - data types - operands and operators - gate level modeling - data flow modeling - behavioral modeling - structural modeling – primitives-Tasks and functions - Writing test bench. (9+6)

**FIELD PROGRAMMABLE GATE ARRAYS:** Introduction – FPGA Technology – DSP Technology Requirement – Design Implementation – FPGA Architectures – Xilinx – Altera Flex – Design Principles using FPGAs – Implementing DSP Functions in FPGA (9+6)

**DIGITAL SIGNAL PROCESSING WITH FPGAS:** Design of Binary Adders, Multipliers and Dividers- Design of FIR Filters – Design of IIR Filters – Multirate Signal Processing – Decimation – Interpolation – Polyphase Decomposition – Multistage Decimator – Filter Banks – DFT and FFT Algorithms – Error Control and Cryptography-FPGA design of LMS Algorithm. (9+6)

**SOFTWARE RADIO:** Block Diagram of Software Radio –Numerically controlled oscillator – Digital Up converters – Digital Down Converters and demodulators – Universal Modulator and Demodulator using CORDIC. (9+6)

**APPLICATIONS:** Incoherent Demodulation – digital approach for I and Q generation, Special Sampling Schemes. Coherent Demodulation Schemes - Applications of FPGA to Software Radio. (9+6)

**TUTORIAL COMPONENT:**

1. Behavioral, Structural, and Data flow modeling using Verilog
2. Switch level modeling and UDP modeling using Verilog
3. Writing test benches using Verilog
4. FPGA implementation of FFT and IFFT algorithm.
5. FPGA Implementation of programmable PN sequence generator.
6. Implementation of Universal Modulator and Demodulator using CORDIC
7. SDR implementation using Universal Software Radio Peripheral

**15LC52 ADVANCED DIGITAL COMMUNICATION LABORATORY**

**0 0 2 1**

In this course the students will be provided with an orientation program on the following equipment/software for duration of 15 hours. After this orientation each student is expected to formulate a complete an activity of interest which has to be derived from the orientation program under the guidance of a faculty. The details like background, problem definition, state of technology/ knowledge in that area by a good literature review (5 latest papers), objectives, methodology, equipment that can be used from the orientation program, results from the experiments and their interpretation with respect to the assumptions or background and a formal conclusion are expected in the report which is to be submitted at the end of the semester. This work is evaluated for the credit assigned. Expected hours needed for this work is 40 hours.

### Topics for orientation program

- BER Analysis of digital modulation schemes – ASK, PSK, BPSK, QPSK, QAM and MSK.
- Eye pattern visualization using VSA.
- Equalizer Design.
- PN Sequence generation and testing of DSSS and FHSS.
- Simulation of OFDM modulation scheme
- Simulation of MC-CDMA scheme

Total P: 30

## SEMESTER III

### 15LC53 COMMUNICATION SYSTEM DESIGN LABORATORY

0 0 2 1

In this course the students will be provided with an orientation program on the following equipment/software for duration of 15 hours. After this orientation each student is expected to formulate a complete activity of interest which has to be derived from the orientation program under the guidance of a faculty. The details like background, problem definition, state of technology/ knowledge in that area by a good literature review (5 latest papers), objectives, methodology, equipment that can be used from the orientation program, results from the experiments and their interpretation with respect to the assumptions or background and a formal conclusion are expected in the report which is to be submitted at the end of the semester. This work is evaluated for the credit assigned. Expected hours needed for this work is 40 hours.

### Topics for orientation program

- Simulation of CDMA Transmitter and Receiver.
- Coding Techniques for Wireless Communication.
- Design and analysis of fading techniques for wireless communication.
- Analysis of diversity schemes for wireless communication system.
- Design of MIMO wireless communication system.
- Design and analysis of MIMO-OFDM transceiver.
- Simulation and analysis of Bluetooth and Zigbee communication protocols.

Total P: 30

### 15LC71 PROJECT WORK-I

0 0 6 3

- ❖ Identification of a real life problem in thrust area
- ❖ Developing a mathematical model for solving the above problem
- ❖ Finalization of system requirements and specification
- ❖ Proposing different solutions for the problem based on literature survey
- ❖ Future trends in providing alternate solutions
- ❖ Consolidated report preparation of the above

Total P: 90

## IV SEMESTER

### 15LC72 PROJECT WORK –II

0 0 28 14

The project work involves the following:

#### Preparing a project- brief proposal including

- ❖ Problem identification
- ❖ A statement of system / process specifications proposed to be developed (Block Diagram/ Concept tree)
- ❖ List of possible solutions including alternatives and constraints
- ❖ Cost benefit analysis
- ❖ Time line of activities

#### A report highlighting the design finalization [based on functional requirements & standards (if any)]

#### A presentation include the following

- ❖ Implementation phase( Hardware / Software / both)
- ❖ Testing and validation of the developed system
- ❖ Learning in the Project

#### Consolidated report preparation

Total P: 420

## ELECTIVE THEORY COURSES

### 15LC21/15LW07 RF ACTIVE CIRCUIT DESIGN

3 0 0 3

**LINEAR RF AMPLIFIER DESIGN GENERAL CONSIDERATIONS:** Introduction power gain definitions- neutralization- unilateral transducer gain – RF circuit stability considerations- stabilizing an active two port – bipolar transistor- dc bias techniques- statistical analysis- circuit layout considerations. (9)

**LINEAR AND LN RF AMPLIFIERS** Introduction –bilateral RF amplifier design for maximum small-signal gain – multistage amplifiers- operating gain design for maximum linear output power- noise in RF circuits- available gain design technique- comparison of the various amplifier designs and smith chart based graphical design aids- broadband amplifiers. (9)

**ACTIVE RF DEVICES AND THEIR MODELLING-** Diode model- two port devices models- Nonlinear circuit simulation techniques- classification of nonlinear circuit simulators- harmonic balance method- harmonic balance analysis of oscillators. (9)

**HIGH POWER RF TRANSISTOR AMPLIFIER AND OSCILLATOR DESIGN** Nonlinear concept- quasi linear power amplifier design- categories of amplifiers- power amplifier design example- bias considerations- distortion reduction- oscillators – principles of design – oscillator design examples. (9)

**MIXER AND FREQUENCY MULTIPLIERS** – Overview of mixers and their applications in systems- diode mixers and their topologies- transistor mixer design- frequency multipliers- an overview- doublers- introduction to radio systems applications and software define radio. (9)

**Total L: 45**

#### REFERENCES:

3. Reinhold Ludwig and Pavel Bretchko, "RF Circuit Design: Theory and Applications", Pearson Education, 2011.

### 15LC22 MODELING AND SIMULATION OF COMMUNICATION SYSTEMS

3 0 0 3

**SIMULATION AND MODELING METHODOLOGY:** Modeling linear time invariant system, Modeling linear time varying systems, Modeling memoryless nonlinear systems, Modeling nonlinear system with memory, Solving nonlinear differential equations using numerical methods – Solution using explicit and implicit methods. (9)

**MODELING OF COMMUNICATION SYSTEMS:** Modeling of functional blocks in communication systems, Transmitter and Receiver Subsystems. (9)

**COMMUNICATION CHANNELS AND MODELS:** Wireless fading channel models, Discrete Markov fading channel models. (9)

**ESTIMATION OF PARAMETERS IN SIMULATION:** Estimation of performance measures from simulation, Importance sampling, other performance estimation methods, Variance reduction techniques, Simulation optimization, Simulation software for communication systems. (10)

**CASE STUDIES** (8)

**Total L: 45**

## 15LC23/15LW25 COOPERATIVE COMMUNICATION AND COGNITIVE RADIO

3 0 0 3

**INTRODUCTION TO COOPERATIVE COMMUNICATIONS:** Cooperation protocols - Hierarchical cooperation; Cooperative communications with single relay; Multi-node cooperative communications; Distributed space-time coding (DSTC) - Distributed space-frequency coding (DSFC); Relay selection (10)

**COOPERATIVE NETWORKING:** Energy efficiency in cooperative sensor networks; Cognitive multiple access via cooperation; Content-aware cooperative multiple access; Distributed cooperative routing; Source-channel coding with cooperation (10)

**INTRODUCTION TO SOFTWARE DEFINED RADIO AND COGNITIVE RADIO:** Characteristics and Benefits of Software Radio; Dynamic Spectrum Access; Digital dividend; Types of Cognitive Radio; Spectrum policies and Regulations; Information theoretic perspective on Cognitive Radio networks (8)

**COGNITIVE RADIO TASKS:** Spectrum sensing and its methods; Cooperative Spectrum sensing; Spectrum sharing; spectrum mobility; spectrum management; spectrum trading (8)

**RECENT TRENDS AND CHALLENGES IN COGNITIVE RADIO:** OFDM based Cognitive Radio; Security issues in cognitive radio; Game theory in Cognitive radio; applications of cognitive radio; IEEE 802.22 WRAN standard (9)

**Total L: 45**

## 15LC24 / 15LW33 RF MEMS

3 0 0 3

**MICROELECTROMECHANICAL SYSTEMS(MEMS) AND RADIO FREQUENCY MEMS:** Introduction –Microfabrication for MEMS – Electromechanical transducers – Microsensing for MEMS – Materials for MEMS.MEMS MATERIALS AND FABRICATION TECHNIQUES: Metals – Semiconductors – Thin films for MEMS and their deposition techniques – Materials for polymer MEMS – Bulk micromachining for silicon-based MEMS – Silicon surface micromachining – Microstereolithography for polymer MEMS. (10)

**RF MEMS SWITCHES:** Introduction – Switch parameters – Basics of switching – Switches for RF and microwave applications – Electrostatic switching – Approaches for low-actuation –voltage switches – thermal switching –MEMS switch design, modeling and evaluation –MEMS switch design considerations.MEMS INDUCTORS AND CAPACITORS: Introduction – MEMS inductors –MEMS capacitors. (10)

**MICROMACHINED RF FILTERS AND PHASE SHIFTERS:** Introduction – Modeling of mechanical filters - Micromechanical filters – Micromachined phase shifters: Introduction – Types of phase shifters and their limitations – MEMS phase shifters. (9)

**MICROMACHINED TRANSMISSION LINES AND COMPONENTS:** Introduction – Micromachined transmission lines and components – Design, fabrication and measurements. (8)

**MICROMACHINED ANTENNA:** Introduction - Overview of microstrip antenna – Micromachining techniques to improve antenna performance – Micromachining as a fabrication process for small antenna – Micromachined reconfigurable antenna. (8)

**Total L: 45**

## 15LC25 / 15LV10 VLSI SIGNAL PROCESSING

3 0 0 3

**ITERATION BOUND:** Introduction, Data flow graph representations, loop bound and iteration bound, Algorithms for computing Iteration bound, iteration Bound of multirate Data-Flow Graphs (9)

**PIPELINING AND PARALLEL PROCESSING:** Introduction - Pipelining of FIR Digital filters - Parallel processing - Pipelining and parallel processing for Low power. (8)

**TRANSFORMATIONS-RETIMING:** Introduction - Definitions and Properties - Solving system of Inequalities - Retiming Techniques. **UNFOLDING:** Introduction - An algorithm for unfolding - Properties of unfolding - Critical path, unfolding and retiming - Application of unfolding. **FOLDING:** Introduction - folding Transformation - Register Minimization Techniques - Register Minimization in folded Architectures. (10)

**FAST CONVOLUTION:** Cook - Toom algorithm –modified Cook - Toom algorithm Winograd algorithm- modified Winograd algorithm, Algorithmic strength reduction in filters and transforms-parallel FIR filters, Parallel architectures for Rank-order filters. (9)

**POWER ANALYSIS:** Scaling versus power consumption-power analysis-power reduction techniques-power estimation techniques-low power IIR filter design-Low power CMOS lattice IIR filter. (9)

**Total L: 45**

## 15LC26/15LW30 RADAR COMMUNICATION

3 0 0 3

**INTRODUCTION TO RADAR-** Basics of radar, EM Waves & properties- applications of radar, radar frequencies-radar block diagram, Radar Coordinates, Radar equation for hard targets and the SNR-radar cross section of targets, Radar Resolution Elements, Pulse, CW and FMCW Radars-configurations, transmitter power- pulse repetition frequency, Duty Ratio, Pulse Compression, Coding (9)

**DETECTION OF SIGNALS IN NOISE AND RADAR SIGNALS** – Introduction to Noise in detail, probability density functions – probabilities of detection and false alarm-matched filter receiver-detection criteria – integration of radar pulses - constant-false alarm rate receivers - Radar Wave forms, Pulse Compression, Ambiguity Diagram. (9)

**RADAR TRANSMITTER AND RECEIVER** Introduction- Types of Transmitters - linear-beam power tubes- solid-state RF power sources- magnetron- Klystron, crossed-filed amplifier- radar receiver- receiver noise figure- super heterodyne receiver, Digital Receivers, duplexers and receiver protectors- radar displays-Human Machine Interface (HMI). (9)

**RADAR ANTENNA** – Functions of radar antenna- antenna parameters- antenna radiation pattern and aperture illumination - reflector antennas- electronically steered phased array antennas- phase shifters – frequency - scan arrays-- architectures for phased arrays , radiators for phased arrays- mechanically steered planar array antennas- radiation pattern synthesis -effect of errors on radiation patterns - low side lobes antennas. (9)

**MTI AND PULSE DOPPLER RADAR-** Introduction to Doppler and MTI radar- delay –line cancellers- staggered pulse repetition frequencies- doppler filter banks- digital MTI processing - Moving target detector- limitations to MTI performance- pulse Doppler radar-MTD, Tracking radar- monopulse tracking- conical scan and sequential lobing- comparison of trackers. tracking accuracy-low-angle tracking- Atmospheric & Weather Radars: Precipitation Radars, Doppler Weather Radar, Polarimetric Radar, Clear Air Radars. (9)

**Total L: 45**

## 15LC27 COMPUTER VISION

3 0 0 3

**IMAGE FORMATION AND PROCESSING:** Introduction – Geometric primitives and Transformations – Photometric Image formation – The digital camera. Introduction to image processing – point – spatial – Fourier Transform – Pyramids and wavelets – Geometric transformations – global optimization. (9)

**FEATURE DETECTION AND MATCHING:** Introduction – Points and patches – Feature detectors – Feature Descriptors – SIFT – PCA SIFT – Gradient location orientation histogram (GLOH) - Steerable filters – Feature matching - Feature tracking – application. (9)

**SEGMENTATION:** Introduction - Active contours – Snakes – Scissors – Level sets – Split and merge – Watershed, Region splitting, region merging, graph based segmentation – mean shift and mode finding – Normalized cuts – graph cuts and energy based methods – application. (9)

**COMPUTATIONAL PHOTOGRAPHY:** Photometric calibration – Radiometric response function – Noise level estimation – Vignetting – Optical blur – High dynamic range imaging – Super-resolution and blur removal – Color image demosaicing – application. (9)

**IMAGE RECOGNITION:** Object detection – Face recognition – Instance recognition – category recognition – Bag of words – Part based models – context and scene understanding. Application: Image search. (9)

**Total L: 45**

## 15LC28 ADVANCED WIRELESS COMMUNICATION

3 0 0 3

**MULTIPLE ANTENNA PROPAGATION AND ST CHANNEL CHARACTERIZATION :** Wireless channel, Scattering model in macrocells, Channel as a ST random field, Scattering functions, Polarization and field diverse channels, Antenna array topology, Degenerate channels, reciprocity and its implications, Channel definitions, Physical scattering model, Extended channel models, Channel measurements, sampled signal model, ST multiuser and ST interference channels, ST channel estimation. (10)

**CAPACITY OF MULTIPLE ANTENNA CHANNELS :** Capacity of frequency flat deterministic MIMO channel: Channel unknown to the transmitter, Channel known to the transmitter, capacity of random MIMO channels, Influence of ricean fading, fading correlation, XPD and degeneracy on MIMO capacity, Capacity of frequency selective MIMO channels. (9)

**SPATIAL DIVERSITY :** Diversity gain, Receive antenna diversity, Transmit antenna diversity, Diversity order and channel variability, Diversity performance in extended channels, Combined space and path diversity ,Indirect transmit diversity, Diversity of a space-time- frequency selective fading channel. (8)

**MULTIPLE ANTENNA CODING AND RECEIVERS :** Coding and interleaving architecture, ST coding for frequency flat channels, ST coding for frequency selective channels, Receivers(SISO,SIMO,MIMO),Iterative MIMO receivers, Exploiting channel knowledge at the transmitter: linear pre-filtering, optimal pre-filtering for maximum rate, optimal pre-filtering for error rate minimization, selection at the transmitter, Exploiting imperfect channel knowledge. (9)

**ADVANCED WIRELESS SYSTEMS :** 3G Cellular Systems – Harmonized 3G Systems – Universal Mobile Telecommunications Systems (UMTS) - 3G UMTS signal processing, WCDMA, HSPA, HSPA+, Towards 4<sup>th</sup> G, LTE and LTE advanced, WiMAX, UWB and Millimeter Wave Communication. (9)

**Total L: 45**

## 15LC29 / 15LW35 DETECTION AND ESTIMATION

3 0 0 3

**STATISTICAL DECISION THEORY:** Bayesian Hypothesis Testing - Likelihood Ratio Tests - Minimax Hypothesis Testing - Neyman Pearson Hypothesis Testing - Composite Hypothesis Testing - M'ary Hypothesis Testing. (8)

**SIGNAL DETECTION IN DISCRETE TIME:** Deterministic Signals - Stochastic Signals – Models and Detector Structures – Performance Evaluation - Chernoff Bounds - Applications of Detection in Signal Processing. (8)

**PARAMETER ESTIMATION:** Fundamentals of Estimation Theory - Minimum Variance Unbiased Estimation – Cramer Rao Lower bound – Best Linear Unbiased Estimators - Linear Least Squares Estimation – Nonlinear Least Squares Estimation - Maximum Likelihood Estimation. (10)

**BAYESIAN ESTIMATION:** Bayesian philosophy – General Bayesian Estimators - Minimum Mean Square Error Estimators – Maximum A Posteriori Estimators – Linear MMSE Estimation. (9)

**DISTRIBUTION-FREE ESTIMATION:** Orthogonality Principle – Autoregressive Techniques - Discrete Wiener Filter, Continuous Wiener Filter, Generalization of Discrete and Continuous Filter Representations, Kalman Filter, Extended Kalman Filter - Applications of Estimation in Signal Processing. (10)

**Total L: 45**

### REFERENCES:

## 15LC30 / 13LW34 MULTI USER DETECTION

3 0 0 3

**SINGLE-USER MATCHED FILTER:** Hypothesis testing – Optimal receiver for the single user channel – The Q function – The matched filter in the CDMA system – Asymptotic Multiuser efficiency and related measures – Coherent single user matched filter in Rayleigh fading – Differentially coherent demodulation – Noncoherent modulation. (9)

**OPTIMUM MULTIUSER DETECTION:** Optimum detector for synchronous channels – Optimum detector for asynchronous channels – Minimum error probability in synchronous channel – K user optimum asymptotic efficiency and Near – far resistance – Minimum error probability in the asynchronous channel – Performance analysis in Rayleigh fading – Optimum noncoherent multiuser detection. (9)

**DECORRELATING DETECTOR:** Decorrelating Detector in the synchronous Channel – Decorrelating Detector in the Asynchronous Channel – Truncated Window Decorrelating Detector – Approximate Decorrelator – Performance Analysis in Synchronous and Asynchronous case – Coherent Decorrelator in presence of fading – Differentially Coherent Decorrelation- Decorrelation for Nonlinear Modulation. (9)

**NON - DECORRELATING DETECTOR:** Optimum linear multiuser detection – Minimum Mean Square Error (MMSE) linear multiuser detection – Performance of MMSE linear multiuser detection – Adaptive MMSE linear multiuser detection – Canonical representation of linear multiuser detectors – Blind MMSE multiuser detector. (9)

**DECISION-DRIVEN MULTIUSER DETECTORS:** Successive Cancellation – Performance Analysis of Successive Cancellation – Synchronous Decorrelating Decision-Feedback – Synchronous MMSE Decision-Feedback – Asynchronous Decision-Feedback. (9)

**Total L: 45**

## 15LC31 / 15LW43 DATA COMPRESSION

3 0 0 3

**INTRODUCTION:** Compression Techniques - Overview of information theory - lossless and lossy coding– Modeling and Coding - Taxonomy of compression techniques – Rate distortion theory - Huffman coding – Non-Binary Huffman codes – adaptive Huffman coding – Application of Huffman coding. (8)

**ARITHMETIC CODING AND DICTIONARY TECHNIQUES:** Introduction- coding a sequence – generating deciphering the tag – Generating a binary code – Uniqueness of arithmetic code – Algorithm, integer implementation – comparison of Huffman and arithmetic coding – Applications -Static and Adaptive dictionary – LZ77, LZ78, LZW approach – Applications - Facsimile encoding – run length coding – comparison of MH, MR, MMR and JBIG. Scalar and Vector Quantization (10)

**AUDIO COMPRESSION:** Audio compression techniques - frequency domain and filtering - basic sub-band coding -application to speech coding - G.722 - application to audio coding - MPEG audio - silence suppression - speech compression techniques – Vocoder. (10)

**IMAGE COMPRESSION:** Predictive techniques - DPCM, DM - KL transform – discrete cosine, Walsh- Hadamard transform - JPEG, Wavelet based compression: quad-trees, EZW, SPIHT, JPEG-2000. (9)

**VIDEO COMPRESSION:** Video signal representation – Motion compensation – MPEG standards - Motion estimation techniques - H.261 family of standards - Motion video compression. (8)

**Total L: 45**

**REFERENCES:**

1. Khalid Sayood, "Introduction to Data Compression", Morgan Kaufman, 2012.
2. Salomon D, "Data Compression The Complete Reference", Springer, 2007.

## 15LC32 / 15LW23 WAVELETS AND SUBBAND CODING

**3 0 0 3**

**INTRODUCTION:** Signal spaces - concept of Convergence - Hilbert spaces for energy signals. Fourier basis & Fourier Transform – Limitations of standard Fourier analysis – Need for Time-Frequency Analysis, Spectrogram plot – Windowed Fourier transform Tiling of the Time-Frequency Plane for STFT – Heisenberg's Uncertainty principle – Short time Fourier transform (STFT) Analysis- short comings of STFT- Need for Wavelets. (9)

**CONTINUOUS WAVELET TRANSFORMS (CWT):** Introduction, Continuous Time wavelets, Definition of CWT, The CWT as a correlation, Constant Q-Factor Filtering Interpolation and time frequency resolution, the CWT as an operator, inverse CWT. (9)

**DISCRETE WAVELET TRANSFORM (DWT) AND MRA:** Introduction, Approximation of vectors in nested linear vector spaces, example of an MRA-Bases for the approximations subspaces and Haar scaling function, Bases for detail subspaces and Haar wavelet, Formal definition of an MRA, Construction of a general orthonormal MRA, A wavelet basis for MRA, Interpreting orthonormal MRAs for Discrete time signals, Daubechies Wavelets, Relationship between Filter banks and wavelet basis, Important wavelets: Haar, Mexican hat, Meyer, Shannon, Daubechies (10)

**ADVANCED TOPICS:** Wavelet packets, Non - separable multidimensional wavelets, Bi-orthogonal basis-B-Splines, Lifting scheme of wavelet generation, Multiwavelets, Ridgelets, Curvelets. (9)

**APPLICATIONS OF WAVELETS:** Signal Denoising - Sub-band coding of Speech and music– Image Compression using 2-D DWT- JPEG 2000 standard - Fractal Signal Analysis. (8)

**Total L: 45**

**REFERENCES:**

## 15LC33 / 15LW28 OPTICAL NETWORKS

**3 0 0 3**

**INTRODUCTION:** Introduction to WDM and TDM; Wireless Optical Systems; Key Optical Nodes; Evolution of Optical Systems; Key attributes and characteristics of Optical Fiber; The Telecommunications Infrastructure; Timing and Synchronization. (9)

**SONET/SDH and OTN:** SONET/SDH – Multiplexing structure, Frame structure, Functional components, problem detection, payloads, Virtual Tributaries, overhead bytes, SONET & SDH concatenation. OTN - Architecture, Digital wrappers, Control Planes, Layered model, Encapsulation and Decapsulation operations, Generic Framing Procedure. (10)

**WDM AND OPTICAL NETWORKS:** WDM-DWDM-operations, components. Network topologies, protection schemes, robustness, diversity, 1: N protection channel sharing, BLSR, PONs and Metro Optical networking. MPLS and optical networks, Label switching, Lambda switching, Traffic Engineering. (9)

**LMP AND OPTICAL ROUTERS:** LMP - Link up, LMP messages, connectivity, Fault management. Optical Routers - switching, preferences, OSP, LSP, load increase, technologies, MEMS, Thermo, bubble, Granularity of Labels. (9)

**OPTICAL INTERNETS:** ATM vs. IP in optical internets: IP over ATM & SONET, OSI internet layered model, Encapsulation & its methods, PPP packet, ATM vs. IP debate. Optical Internets: Evolution to 3G architecture, Migration to IP networking, IP subnets, non-optical nodes, routing tables. (8)

### 15LC34 / 15LW36 SMART ANTENNAS

**3 0 0 3**

**INTRODUCTION:** Antenna gain, Phased array antenna, power pattern, beam steering, degree of freedom, optimal antenna, adaptive antennas, smart antenna - key benefits of smart antenna technology, wide band smart antennas, Digital radio receiver techniques and software radio for smart antennas. (9)

**NARROW BAND PROCESSING:** Signal model conventional beamformer, null steering beamformer, optimal beamformer, Optimization using reference signal, beam space processing. (8)

**ADAPTIVE PROCESSING:** Sample matrix inversion algorithm, unconstrained LMS algorithm, normalized LMS algorithm, Constrained LMS algorithm, Perturbation algorithms, Neural network approach, Adaptive beam space processing, Implementation issues. (9)

**BROADBAND PROCESSING:** Tapped delay line structure, Partitioned realization, Derivative constrained processor, Digital beam forming, Broad band processing using DFT method. (9)

**DIRECTION OF ARRIVAL ESTIMATION METHODS:** Spectral estimation methods, linear prediction method, Maximum entropy method, Maximum likelihood method, Eigen structure methods, Music algorithm – root music and cyclic music algorithm, the ESPRIT algorithm. **DIVERSITY COMBINING:** Spatial diversity selection combiner, switched diversity combiner, equal gain combiner, maximum ratio combiner, optical combiner. (10)

**Total L: 45**

### 15LC35 / 15LW37 ADAPTIVE SIGNAL PROCESSING

**3 0 0 3**

**INTRODUCTION:** The Filtering problem – Linear optimum filters - Adaptive filters – Approaches to the development of linear adaptive filters – Applications: System identification – Inverse modeling – Prediction - Interference Cancellation – Adaptive linear combiner – Performance function – Gradient and Minimum Mean Square error - Properties of the Quadratic Performance surface. (9)

**SEARCH METHODS:** Basic ideas of gradient search methods - Gradient Search Methods: Newton's method, Steepest Descent Method – Comparison - Least-Mean-Square (LMS) algorithm. (9)

**ADAPTIVE ALGORITHMS:** Convergence – Learning Curve - Misadjustment – Excess MSE - LMS Variants - Recursive Least Squares (RLS) Algorithm – Matrix inversion lemma - Exponentially Weighted RLS – Sliding Window RLS – convergence - Kalman Filter – Innovation process – Extended Kalman Filter. (9)

**FILTERING APPLICATIONS:** Adaptive Modeling & System Identification - Inverse Adaptive Modeling – Deconvolution – Equalization - Adaptive self tuning filter - Adaptive Line enhancer. - Harmonic cancellation with adaptive prediction. (9)

**NOISE AND INTERFERENCE REMOVAL:** Adaptive Interference Canceling - Adaptive noise canceling - Canceling power supply interference in ECG – canceling maternal ECG interference in fetal ECG - Adaptive echo cancellation in Telephone channels. (9)

**Total L: 45**

**REFERENCES:**

## 15LC36 SOFTWARE RADIO ARCHITECTURE

**3 0 0 3**

**INTRODUCTION:** – Software Defined Radio- SDR concepts & history,- Characteristics and Benefits of Software Radio – Design Principles of a Software Radio, Ideal SDR architecture, SDR Based End-to-End Communication (9)

**RF SYSTEM DESIGN** – Introduction- Principal Challenge of Receiver Design - Enhanced Flexibility of the RF Chain with Software Radios - Noise and Channel Capacity- Link Budget- Receiver Requirements- Multicarrier Power Amplifiers- Signal Processing Capacity Tradeoff- Baseband Signal Processing-, Analog-to-Digital and Digital-to-Analog Conversion (9)

**DIGITAL GENERATION OF SIGNALS:** Introduction-Comparison of Direct Digital Synthesis with Analog Signal Synthesis- Approaches to Direct Digital Synthesis-Analysis of Spurious Signals-Spurious Components due to Periodic Jitter-Band pass Signal Generation. (9)

**SMART ANTENNAS and SDR PLATFORMS:** Introduction – Smart Antenna- Adaptive techniques, Phased array antennas, Applying SDR principles to antenna systems, Smart antenna architectures. Hardware platforms for SDR – Universal Software Radio Peripheral, Wireless open Access Research platform, RTL SDR receiver, comparison of different platforms, Software platforms for SDR- GNU Radio (10)

**CASE STUDY:** Worldwide frequency band plans , SDR Forum, SDR Applications - Software Communications Architecture, Joint Tactical Radio System, Navigation applications and Cognitive Radio. (8)

**Total L: 45**

**REFERENCES:**

1. Jeffrey H Reed, "Software Radio: A Modern Approach to Radio Engineering", PEA Publication, 2002.

## 15LC37 SPEECH SIGNAL PROCESSING

**3 0 0 3**

**SPEECH SIGNAL MODELLING:** Speech signal characteristics and classifications - Speech production mechanism - Acoustic Theory of speech production - Source – Filter model - Lossless Tube Models - Digital Model of speech signals. (9)

**SPEECH SIGNAL ANALYSIS:** Time domain Analysis for speech processing – Short time energy and magnitude - short time average zero crossing - Speech vs silence discrimination (9)

Pitch period estimation using autocorrelation - Short time Fourier analysis- Definition and properties - Design of digital filter banks - Pitch detection - analysis by synthesis. (9)

**SPEECH CODING:** Linear predictive coding - principle - solution of LPC equation - Cholesky decomposition method - Durbin's method - Lattice formulation –Frequency domain coding – Model based coding – LPC residual coding. (9)

**SPEECH RECOGNITION:** Template training method - Hidden Markov Model - Gaussian Mixture model - connected word recognition - Speaker identification/Verification. (9)

**Total L: 45**

**REFERENCES:**

1. Rabiner L R and Schaffer R W, "Digital Processing of Speech Signals", Prentice -Hall, Englewood - Cliffs, New Jersey, 1986.

## 15LC38 WIRELESS SENSOR NETWORKS

**2 2 0 3**

**INTRODUCTION:** Challenges for wireless sensor networks, Comparison of sensor network with ad hoc network, Single node architecture, Hardware components, Telos Mote Network architecture, Sensor network scenarios, Design principles Operating system for Sensor networks. (7+7)

**COMMUNICATION PROTOCOLS:** Physical layer and transceiver design consideration in wireless sensor networks, MAC protocols –fundamentals of wireless MAC protocols, low duty cycle protocols and wakeup concepts, contention-based protocols, Schedule-based protocols, Gossiping and agent-based uni cast forwarding , Energy-efficient unicast, Broadcast and multicast, geographic routing , mobile nodes, Data centric and content-based networking, Data aggregation. (9+9)

**SENSOR LOCALIZATION AND TIMESYNCHRONIZATION:** Introduction , Elements of Localization ,Sensor Localization with multidimensional scaling, Localization in wireless sensor networks, On the security of WSN Localization, Time synchronization in wireless sensor network. (7+5)

**OPEN ISSUES AND DESIGN CHALLENGES:** Internet of Things, Wireless sensor and Actor networks, Underground sensor networks underwater sensor networks, Video Sensor networks, Wireless Body Area Networks (WBAN) for health-monitoring, indoor surveillance. (7+9)

**Total L: 30+T: 30=60**

**TUTORIAL COMPONENT:**

1. Basics of WSN programming using WSN RTOS.
2. Implementation of unicast and broadcast transmission.
3. Design and implementation of Environmental monitoring using Sensor networks.
4. Simulating WSNs made up of motes running RTOS using the simulation framework
5. Design and simulation of MAC and Routing protocol for mobile sensor networks
6. Design and implementation of internet of things.

## 15LC39 / 15LW32 RADIO FREQUENCY INTEGRATED CIRCUIT DESIGN

**3 0 0 3**

**ISSUES IN RFIC DESIGN, NOISE, LINEARITY, and FILTERING:** Lower frequency analog design and microwave design versus radio frequency integrated circuit design - Impedance levels for microwave and low-frequency analog design- noise - linearity and distortion in RF Circuits - dynamic range - filtering issue. (9)

**REVIEW OF TECHNOLOGY :** Small -signal model of bipolar transistor - high frequency effects - noise in bipolar transistors - base shot noise-noise sources in the transistor model - bipolar transistor design considerations-CMOS transistor.- impedance matching - tapped capacitors and inductors - the concept of mutual inductance - tuning a transformer - bandwidth of an impedance transformation network-quality factor of an LC resonator. (8)

**DESIGN OF PASSIVE CIRCUIT ELEMENTS IN IC TECHNOLOGIES:** Technology backend and metallization in IC technologies - sheet resistance and skin effect - parasitic capacitance and inductance - current handling in metal lines - design of inductors and transformers - characterization of inductor-layout of spiral inductors - on-chip transmission lines - high frequency measurements of on-chip passives and common De-Embedding techniques - packaging. (9)

**LNA AND POWER AMPLIFIER :** basic amplifiers - amplifiers with feed back - noise in amplifiers - linearity in amplifiers - differential pair and other differential amplifiers - low-voltage topologies for LNAs and the use of on-chip transformers - DC bias networks - temperature effects - broad band LNA design. Power amplifier: power capability - efficiency calculations - matching considerations - Class A,B,C,D,E,F,G,H and S amplifiers - summary of amplifier classes for RF Integrated circuits - AC load line - matching to achieve desired power - packaging - effects and implications of non linearity - linearization techniques - CMOS power amplifier example. (10)

**MIXERS:** mixing with nonlinearity - basic mixer operation - controlled transconductance mixer - double-balanced mixer - mixer with switching of upper quad - analysis of switching modulator-mixer noise - linearity - improving isolation - image reject and single-sideband mixers - alternative mixer designs - general design comments - CMOS mixers. (9)

**Total L: 45**

## **15LC40/15LW41 WIRELESS AD HOC NETWORKS**

**3 0 0 3**

**INTRODUCTION AND MAC PROTOCOLS:** Fundamentals of Wireless Communication Technology, Characteristics of the Wireless Channel, Modulation Techniques, Multiple Access Techniques, Networking Standards, Wireless Networks, Mobile IP, Ad Hoc Wireless Networks Designing a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC Protocols - Contention-Based, Contention-Based with Reservation Mechanisms, Contention-Based with Scheduling Mechanisms, MAC Protocols that Use Directional Antennas. (9)

**ROUTING AND MULTICAST ROUTING PROTOCOLS:** Designing a Routing Protocol for Ad Hoc Wireless Networks, Classifications of Routing Protocols - Table-Driven, On-Demand, Hybrid, Routing Protocols with Efficient Flooding Mechanisms, Hierarchical, Power-Aware Routing Protocols. Designing a Multicast Routing Protocol, Operation of Multicast Routing Protocols, Classifications of Multicast Routing Protocols - Tree-Based, Mesh-Based, Energy-Efficient, Multicasting with Quality of Service Guarantees. (10)

**TRANSPORT LAYER AND SECURITY PROTOCOLS:** Designing a Transport Layer Protocol for Ad Hoc Wireless Networks, Classification of Transport Layer Solution, TCP over Ad Hoc Wireless Networks, Security in Ad Hoc Wireless Networks, Network Security Requirements. Issues and Challenges in Security Provisioning, Network Security Attacks, Key Management, Secure Routing in Ad Hoc Wireless Network (8)

**QUALITY OF SERVICE AND ENERGY MANAGEMENT:** QoS in Ad Hoc Wireless Networks, Classifications of QoS Solutions, MAC Layer Solutions, Network Layer Solutions, QoS Frameworks for Ad Hoc Wireless Networks. Energy Management in Ad Hoc Wireless Networks, Classification of Energy Management Schemes - Battery Management Schemes, Transmission Power Management Schemes, System Power Management Schemes. (10)

**ADVANCES IN WIRELESS NETWORKS:** Ultra-wide-band radio communication, Wireless fidelity systems, Optical wireless networks, Multimode 802.11 - IEEE 802.11a/b/g, wireless AD Hoc sensor Networks. (8)

**Total L: 45**

**REFERENCES:**

## 15LC42/15LW42 COMPUTATIONAL ELECTROMAGNETICS

3 0 0 3

**EM REVIEW:** E-field, permittivity, Coulombs Law, Flux of a vector field, Gauss Law for E fields (Integral), divergence, Gauss Law for E fields (Differential) B-field, permeability, Biot-Savart law, Gauss law for B fields (integral and differential), Divergence Theorem, circulation of a vector field, curl, Stokes Theorem. Gradient. Laplacian. Poisson and Laplace equations. Ampere-Maxwell Law, Faraday-Maxwell Law. Continuity equation. Constitutive equations. (9)

**NUMERICAL DIFFERENTIATION:** Forward difference, backward difference, central difference. Higher order derivatives. Partial derivatives. Solution of Linear Systems: Matrix equivalent. Solution sets. Direct vs iterative methods. Sparse matrices. Libraries. Gaussian Elimination. Gauss-Seidel method. Numerical Integration Riemann Sums Left/right-point rules Midpoint, trapezoid, Simpsons rules Error bounds-Numerical Integration Examples (9)

**METHOD OF MOMENTS:** Greens Functions; Surface equivalence principle; Electrostatic formulation; Magnetostatic formulation; Electric Field Integral Equation; Magnetic Field Integral Equation; Direct and Iterative Solvers; (9)

**FINITE DIFFERENCE TIME DOMAIN METHODS:** 1D wave propagation, yee Algorithm, Numerical dispersion and stability, perfectly matched absorbing boundary conditions, Dispersive materials. Antenna and scattering problems with FDTD, non-uniform grids, conformal grids, periodic structures. (10)

**APPLICATIONS OF CEM:** Antennas, biological electromagnetic effects, electronic packing and high speed circuits, microwave devices and circuits, environmental issues. surveillance and intelligence gathering, homeland security, signal integrity. (8)

## 15LC43 PATTERN CLASSIFICATION

3 0 0 3

**INTRODUCTION TO PATTERN CLASSIFICATION:** Tree Classifiers- Decision Trees:CART,C4.5,ID3, Random Forests. BAYES DECISION THEORY: Discriminant Functions and Services-The Normal Distribution - Bayesian Classification- Estimating Probability Density Functions - Nearest Neighbor Rules -Bayesian Networks (9)

**LINEAR & NONLINEAR CLASSIFIERS:** The Perceptron Algorithm, Least-Squares Methods, Multilayer Perceptron's-Back Propagation Algorithm- Classifier Ensembles-Bagging, Boosting/Adaboost (9)

**FEATURE SELECTION:** Data Pre-processing-ROC Curves-Class Separability Measures-Feature Subset Selection-Bayesian Information Criterion. DIMENSIONALITY REDUCTION: Basis Vectors-Singular Value Decomposition-Independent Component Analysis-Kernel PCA-Wavelets (10)

**CLUSTERING:** Sequential Algorithms-Hierarchical Algorithms-Functional Optimization-Based Clustering-Graph Clustering-Learning Clustering-Clustering High Dimensional Data-Subspace Clustering (9)

**ADDITIONAL FEATURES AND TEMPLATE MATCHING:** Texture-Shape and Size Characterization-Fractals (8)

Total L: 45

## 15LC44 EVOLUTIONARY COMPUTATION

3 0 0 3

**INTRODUCTION:** Soft Computing, requirement, different tools and techniques, usefulness and applications. Artificial Neural Network: Introduction, basic models, Hebb's learning, Perceptron, Multilayer feed forward network, Back propagation, Different issues regarding convergence of Multilayer Perceptron, Competitive learning, Self-Organizing Feature Maps, SVM, Applications. (10)

**FUZZY SETS AND FUZZY LOGIC:** Introduction, Fuzzy sets versus crisp sets, operations on fuzzy sets, Extension principle, Fuzzy relations and relation equations, Fuzzy numbers, Linguistic variables, Fuzzy logic, Linguistic hedges, Applications, fuzzy database. fuzzy controllers, fuzzy pattern recognition, fuzzy image processing. (9)

**GENETIC ALGORITHM (GA):** different operators of GA, analysis of selection operations, Hypothesis of building blocks, Schema theorem and convergence of Genetic Algorithm, Simulated annealing, Boltzmann Machine, Applications. (9)

**ANT COLONY OPTIMIZATION:** Ant foraging behavior - Theoretical considerations – Convergence proofs – ACO Algorithm – ACO and model based search. (8)

**PARTICLE SWARM & ARTIFICIAL BEE COLONY (ABC) OPTIMIZATION:** Principles of bird flocking and fish schooling – Evolution of PSO – Operating principles – PSO Algorithm – Neighborhood Topologies – Convergence criteria – Behavior of real bees, ABC algorithm. (9)

## 15LC45/15LW26 EMBEDDED SYSTEMS

3 0 0 3

**EMBEDDED DESIGN CYCLE:** Differences between the Desktop PC and typical Embedded System-Examples of Embedded Systems-Major hardware and software modules of an embedded system-Product Specification, Hardware/Software Partitioning,

Iteration and Implementation, Detailed Hardware and Software Design, Hardware Software Integration, Product Testing and Release, Maintenance and Upgrading Existing products. (9)

**REVIEW OF EMBEDDED ARCHITECTURES:** CPU Core, Clock and Reset Generator, PLL, RTC, Program Memory, Data Memory, EEPROM, Parallel Ports, Timers/Counters, Watch-dog timers, input-Capture/Output Compare units, PWM unit, Interrupt Structure, Data converters, Serial communication using SCI, SPI, I2C, CAN and USB - Introduction to LIN and MOST - Development and debugging Support: JTAG and BDM. (10)

**EMBEDDED SOFTWARE DEVELOPMENT TOOLS:** Host and Target Machines, Cross-Compilers, Cross-Assemblers, Linker/Locator for Embedded Software, Locator Maps, Intel hex file format/Motorola s-record format. Introduction to Integrated Development Environment (IDE)- programming concepts and embedded programming in C. Debugging and simulation techniques, Programming the target system. (8)

**PERIPHERAL PROGRAMMING:** Developing device drivers, Configuring and programming of ports, timer / counter, data converters, interrupts and serial communication. (9)

**REAL TIME OPERATING SYSTEMS (RTOS):** Survey of software architectures, hard/soft real time systems, Tasks and Task States, Tasks and Data, Semaphores and Shared Data, Message Queues, Mailboxes and Pipes, Timer functions, Events, Memory Management, Interrupt Routines in RTOS Environment. Case study: Programming with RTOS, Application development in ARM micro controllers / Micro controllers / DSP controllers (9)

## 15LC83/15LW81 GREEN COMMUNICATION

3 0 0 3

**COOPERATIVE COMMUNICATIONS AND GREEN CONCEPTS :** Network architectures and research issues in cooperative cellular wireless networks; Cooperative communications in OFDM and MIMO cellular relay networks: issues and approaches; Fundamental trade-offs on the design of green radio networks, Green modulation and coding schemes. (9)

**COOPERATIVE TECHNIQUES:** Cooperative techniques for energy efficiency, Cooperative base station techniques for cellular wireless networks; Turbo base stations ; Antenna architectures for cooperation; Cooperative communications in 3GPP LTE-Advanced, Partial information relaying and Coordinated multi-point transmission in LTE-Advanced. (9)

**RELAY-BASED COOPERATIVE CELLULAR NETWORKS :** Distributed space-time block codes ; Collaborative relaying in downlink cellular systems ; Radio resource optimization; Adaptive resource allocation ; Cross-layer scheduling design for cooperative wireless two-way relay networks ; Network coding in relay-based networks. (9)

**GREEN RADIO NETWORKS :** Base Station Power-Management Techniques- Opportunistic spectrum and load management, Energy-saving techniques in cellular wireless base stations , Power-management for base stations in smart grid environment , Cooperative multicell processing techniques for energy-efficient cellular wireless communications. (9)

**ACCESS TECHNIQUES FOR GREEN RADIO NETWORKS :** Cross-layer design of adaptive packet scheduling for green radio networks; Energy-efficient relaying for cooperative cellular wireless networks ; Energy performance in TDD-CDMA multihop cellular networks ; Resource allocation for green communication in relay-based cellular networks ; Green Radio Test-Beds and Standardization Activities. (9)

**15LC46/15LV41/15LW46 RF CIRCUITS AND MEASUREMENTS****3 2 0 4**

**PASSIVE RF COMPONENTS AND TRANSMISSION LINE ANALYSIS:** High frequency Resistors, Capacitor and Inductors – Transmission Line Analysis: Line equation, Micro strip line, Voltage Reflection Co-efficient, propagation constant phase velocity and special termination - Smith Chart-Impedance transformation - Analysis of parallel RL circuit and parallel RC circuit. (9+6)

**SINGLE AND MULTI PORT NETWORK THEORY AND RF FILTER DESIGN:** Definition - properties - interconnection of networks - ABCD parameters and S parameters - RF Filter Resonator and filter configuration - Butterworth and chebyshev filters. Design of micro strip filters. (9+6)

**DESIGN OF MATCHING NETWORK:** Matching by Discrete Components - Design of two-component matching network, Design of T and  $\pi$  matching network- Matching by micro strip line - Design of matching network - Design of stub matching. (9+6)

**MEASUREMENTS USING VECTOR NETWORK ANALYZER:** Operating principles of VNA-Calibration of VNA- Specification of N and SMA connectors-Inferences of VNA Measurements. (9+6)

**MEASUREMENTS USING SPECTRUM ANALYZER:** Operating principles of spectrum analyzer- measurement categories- Characteristics of Spectrum analyzer-applications of spectrum analyzer. (9+6)

**Total L: 45+T: 30=75****TUTORIAL COMPONENT:**

1. Design, simulation and testing of branch-line coupler.
2. Design, simulation and testing of Rat-race coupler.
3. Design, simulation and testing of stepped impedance filter.
4. Design, simulation and testing of microstrip filter.

**REFERENCES:**

## 15LC47/15LW45/15LV42 WIRELESS TECHNOLOGIES AND MEASURING TOOLS

3 2 0 4

**MODERN WIRELESS COMMUNICATION SYSTEMS:** Second Generation, Third Generation mobile Cellular networks – 4G, 5G, LTE, LTE A- Cognitive Radio Technology. (9+6)

**RF SIGNAL AND SYSTEM FUNDAMENTALS:** Basics of RF and Microwaves - Scattering parameters – Distribution of power – Deterministic & Random signal Power spectral densities – Microwave passive devices – Mixers – Switches – Attenuators – Connectors & adaptors. (9+6)

**RF SIGNAL GENERATION:** Oscillator Circuits – Direct Digital synthesis – PLL Based Synthesizers – Arbitrary waveform generator – Vector Signal Generator - Phase frequency detector. (9+6)

**POWER AND SCATTERING MEASUREMENTS:** Power detectors and instrumentation – Primary power standards – power measurement techniques – History of vector network analyzers – Measurement types in VNA – Two port network analyzer calibration. (9+6)

**RF MODULAR INSTRUMENTS:** Introduction – Understanding software designed systems – Multichannel measurements – Customized measurement systems – Instruments: Spectrum/Signal Analyser – Digital storage Oscilloscope - Mixed signal Oscilloscopes. (9+6)

**Total L: 45 + T: 30=75**

### TUTORIAL COMPONENT:

1. Study of Vector Signal analysis software.
2. Analysis of BER, EVM and constellation for Digital modulation techniques.
3. Wave form generation and play back operation using vector signal generator and VSA hardware.
4. Frequency domain measurements using Signal analyser.
5. Time domain measurements using Mixed signal oscilloscope.

### REFERENCES:

## 15LC48/15LW47/15LV43 EMBEDDED SYSTEM DESIGN

3 2 0 4

**EMBEDDED DESIGN CYCLE:** Differences between the Desktop PC and typical Embedded System-Examples of Embedded Systems-Major hardware and software modules of an embedded system-Product Specification, Hardware/Software Partitioning, Iteration and Implementation, Detailed Hardware and Software Design, Hardware Software Integration, Product Testing and Release, Maintenance and Upgrading Existing products. (4)

**REVIEW OF EMBEDDED ARCHITECTURES:** CPU Core, Clock and Reset Generator, PLL, RTC, Program Memory, Data Memory, EEPROM, Parallel Ports, Timers/Counters, Watch-dog timers, input-Capture/Output Compare units, PWM unit, Interrupt Structure, Data converters, Serial communication using SCI, SPI, I2C, CAN and USB - Introduction to LIN and MOST - Development and debugging Support: JTAG and BDM. (12+6)

**EMBEDDED SOFTWARE DEVELOPMENT TOOLS:** Host and Target Machines, Cross-Compilers, Cross-Assemblers, Linker/Locator for Embedded Software, Locator Maps, Intel hex file format/Motorola s-record format. Introduction to Integrated Development Environment (IDE)- programming concepts and embedded programming in C. Debugging and simulation techniques, Programming the target system. (8+3)

**PERIPHERAL PROGRAMMING:** Developing device drivers, Configuring and programming of ports, timer / counter, data converters, interrupts and serial communication. (6+6)

**REAL TIME OPERATING SYSTEMS (RTOS):** Survey of software architectures, hard/soft real time systems, Tasks and Task States, Tasks and Data, Semaphores and Shared Data, Message Queues, Mailboxes and Pipes, Timer functions, Events, Memory Management, Interrupt Routines in RTOS Environment. (8+6)

**CASE STUDY:** Study and analysis of generating low frequency bio signals, High power signal analysis using Mixed Signal oscilloscopes, FPGA Debugs and host of serial protocols like CAN/LIN,USB, RS232/UART, I<sup>2</sup>C/SPI, MIL-STD 1553/ARINC 429, I<sup>2</sup>S, Application development in ARM micro controllers / Micro controllers / DSP controllers, Programming with RTOS. (7+9)

**Total L: 45+T: 30=75**

**TUTORIAL COMPONENT:**

1. Parallel Port programming and interfacing of I/O devices.
2. Interrupt programming: Timer interfacing and analyzing capture compare module.
3. Serial port interfacing.
4. Serial protocol analyzing: RS232 / RS485 / SPI / SCI / I2C / CAN / USB.
5. Programming and Interfacing of data converters.

**15LC50/15LW44/15LN34 DATA STRUCTURES AND ALGORITHMS****2 2 0 3**

**INTRODUCTION:** Software Development process – Data structures - Abstract Data Types - Analysis of algorithms - Best, worst and average case time complexities - notations. (4+4)

**ARRAYS:** Operations - Implementation of one, two, three and multi dimensioned arrays – Sparse and dense matrices - Applications. (4+6)

**STACK AND QUEUE:** Stack operations - implementations - Applications: Function handling - Recursion – Expression Evaluation. Queue - operations - implementations - Priority Queues - Dequeues - Applications: Job scheduling. (6+4)

**LISTS :** Operations - Singly linked lists, doubly linked lists, Circular lists - Applications – Linked Stacks - Linked queues. (6+4)

**TREES AND GRAPHS:** Tree Terminologies - Implementation - Binary Tree: Properties –representation of trees, operations- Traversals- Expression trees - Infix, Postfix and Prefix expressions – Dijkstra's Algorithms-Floyd's Algorithm.Graph Terminologies- representations-graph search methods: Breadth first search, Depth first search, Minimum spanning trees-Multistage graph. (6+6)

**SORTING:** Insertion sort - Selection sort - Bubble sort - Radix sort - Algorithms and their time complexities. (4+6)

**TUTORIAL COMPONENT:**

1. Analysis of algorithms
2. Implementation of stack and queue
3. Evaluation of expressions
4. Singly and doubly linked lists implementation
5. Binary tree traversal.
6. Single source shortest path algorithm – Dijkstra's algorithm,
7. All pairs shortest path problem- Floyd's Algorithm
8. Graph search method implementation

## 15LK05 DIGITAL SIGNAL / IMAGE PROCESSING APPLICATIONS

1 0 0 1

**INTRODUCTION:** Transforms for signal and image processing (3)

**ALGORITHMS:** Wiener Filter – Adaptive Filter – Kalman Filter – ICA (4)

**APPLICATIONS:** Implementation of signal / image processing algorithms in MATLAB using real time signals – Speech signal analysis – Biomedical signal analysis – Medical Imaging (Compression, Segmentation, Classification) – Use of Independent Component Analysis (ICA) algorithms for signal / image processing. (8)

**Total L: 15**

## 15LK06 LTE AND THE EVOLUTION TO 4G WIRELESS COMMUNICATIONS

1 0 0 1

**LTE:** Motivation to LTE.- Evolution of Architecture –3GPP with Non-3GPP Architecture- EPC - eNB, HeNB and Relay Nodes -LTE- Advanced LTE Protocol Stacks Summary- Protocol architecture - S1 and X2 Interface, Other interfaces- Security Architecture - MBMS Architecture -CS FallBack, SRVCC, VoLTE –Advantages of LTE. (2)

**PHYSICAL LAYER:** Uplink Physical Layer Design – Downlink physical layer design (5)

**CONTROL PLANE AND USER PLANE PROTOCOLS:** MAC architecture- DL-SCH data transfer- HARQ operation- Multiplexing and assembly- Scheduling Request - RLC architecture- ARQ procedures- Retransmission, Status & Polling, SDU discard procedures. PDCP architecture – procedures. Radio Resource Controller – PLMN and cell selection, connection procedures, Paging. (4)

**NON ACCESS STRATUS:** NAS Introduction- NAS Security- NAS Elementary and Common- eMM Specific & CM Procs- Session Management- NAS Message Format & IE -NAS L3 Signalling. (2)

**CALL PROCESSING PROCEDURES:** Idle Mode Processing - Cell Reselection- Paging- RRC Connection and Release- Measurement and SON- Handover - Intra RAT and Inter-RAT (2)

**Total L: 15**

## 15LK07 ADVANCED AIRCRAFT MISSION AND COMMUNICATION SYSTEMS

1 0 0 1

**MISSION SYSTEMS:** Forward surveillance radar, Aft surveillance radar, Mission acoustics system (MAS), Electro-Optical/Infra-Red (EO/IR) system and Magnetic Anomaly Detection (MAD) system (5)

**COMMUNICATION SYSTEMS:** Intercommunications system (ICS)-Flight Interphone System (FIS)-VHF Communication system- V/UHF Communications system-HF Communication System-Speech Secrecy System (SSS)-Data Link System-IFF Transponder- IFF Interogator-V/UHF Direction Finding system- International Maritime Satellite system-Satellite Service System. (5)

**ELECTRONIC WARFARE – ELECTRONIC SUPPORT MEASURE:** Introduction – General Description-Purpose and functional description of the system with block diagram. Purpose, Location and General / Functional description with pictures / diagrams of Antenna Interface Unit, RF/IF converter, ESM Digital Receiver Processor, ESM Recorder, ESM Power supply, Interference Blanking Unit, Power Divider, Coupler/Amplifier, Bias-T / Equaliser, Antennae-Band 1 array, Antennae-Band 1 Long baseline Interferometer, Antennae-Band 2 Short baseline Interferometer, RFPS Controller, Demodulator and Wide Band Tuner. (5)
